Chapter 1. Understand the Internet of Things (IoT) Services

Internet of Things (IoT) Service Options

At the University of Minnesota, personal and departmental Internet of Things (IoT) devices can be registered for the Wi-Fi service. The current IoT service option is the Encrypted Service.

Encrypted Service

- Uses UofM-IoT SSID
- Better security with encrypted Wi-Fi traffic
- Easier setup process
- Supports more device types
- Requires device registration and a password (also known as a pre-shared key or PSK)

Best Practices for IoT Devices

The IoT service is designed for devices that are unable to log in to Wi-Fi with your Internet ID and password. These are some best practices when registering and using IoT devices on the University Wi-Fi network:

- Any device that is capable of using eduroam should use eduroam. Eduroam is more secure because it has a higher level of encryption.
- Personal device registration expires after one year and **registration must be renewed to continue service**. Devices are automatically removed from the registration database unless they are renewed.
- Regular software updates on IoT devices are recommended.
- If the IoT device asks you to choose a channel when connecting to Wi-Fi, select 5GHz if able.
- If a device uses MAC address randomization that feature should be disabled otherwise the device may not be able to connect to Wi-Fi.

Which devices can be registered for IoT Service

Chapter 2. Register and Connect to the Encrypted Service

Step 1: Find the wireless MAC address

A device's wireless (Wi-Fi) MAC address, also known as hardware or physical address, is used for connecting to the network.

- For any IoT device that needs a companion device (smart phone, computer) to be on the same network for the setup, please follow the steps to [Register your Chromecast Device](#).
- Attempting to use an [Ethernet Adapter](#)? Ensure that you have [registered your device on the wired network](#).

Step 2: Register the device for the Encrypted IoT Service

At the University of Minnesota, personal Internet of Things (IoT) devices such as Xbox, PlayStation, Roku, Apple TV, etc can be registered for Wi-Fi service.

Follow these steps to register your device for the Encrypted IoT Service. This step is a part of the [Register a Personal Device for IoT Wi-Fi Service](#) guide.

Registering a Personal Device for Encrypted IoT Service

Do not register laptops or smart phones using this process unless otherwise specified for temporary IoT device AirGroup setup. Phones and laptops should connect to eduroam using your full University email address (InternetID@umn.edu) and password. Full access to your University account and systems (i.e., MyU, Canvas, PeopleSoft) may not be fully functional on the IoT network. For more information on eduroam, follow [Connect to eduroam](#).

1. Go to the [Wi-Fi Registration webpage](#).
 - This link will only work if you are accessing this article on campus through a device connected to eduroam or you are connected to [VPN](#).
 - If you are registering this device for yourself, sign in with your Internet ID and password.
 - If you're working on behalf of a department or another individual, please contact [Technology Help](#).
2. From the side menu under **Devices**, select **Create Device**.

3. In the **MAC address** field, enter the wireless or [Wi-Fi MAC address](#) of the device.
 - The device name can be whatever you choose. For example, if you are registering a Roku, you might name it Goldy's Roku.
4. Enter a name for the device in the **Device Name** field. This name is to help you identify the device to yourself in the future.
5. Check the **Wi-Fi Password box**.
6. If you are registering a device that you are casting or communicating to or from another device (such as your smartphone), as part of the registration process:
 - a. Check the **AirGroup** box.
 - b. Leave the default **Personal** selected in the **Ownership** section.
 - c. If you will be sharing the device with your roommate or another person, put their Internet ID in the **Shared With** field, separating multiple IDs by commas.
 - This will allow you to cast from another device to the registered device even if they are connected to different SSIDs (e.g. eduroam, UofM-IoT, etc.)
7. Check the **Terms of Use** checkbox to accept the terms of use.
 - The message reads **I am the owner of this device and accept the terms of use**.
8. Select **Create**.
9. Your device is now registered. You can [connect to the IoT Encrypted Service](#).

Note: Personal device registration will expire automatically in 1 year unless registration is renewed.

Step 3: Connect to the Encrypted IoT WiFi Service

At the University of Minnesota, personal and departmental Wi-Fi devices can be connected to the Internet of Things (IoT) service. Follow these steps to connect your device for the Encrypted IoT Service.

NOTE: If your device is using the Legacy Unencrypted IoT service and not the new Encrypted Service, the legacy IoT service will eventually be disabled. **Any new devices should be registered for the new encrypted IoT service.** Existing IoT devices can easily be [converted to the new service](#). Registration is required annually.

Connecting Your Device to Encrypted IoT Service

1. Open the **Network Settings** on your device and view the list of available Wi-Fi networks.
 - This should be near to where your wireless MAC address was listed.

2. From the list of available networks, select **UofM-IoT** and enter the generated password.
3. Your device is now connected.

Please contact [UMN Technology Help](#) if you have problems following the above steps.

Step 4: Check any Known Device Issues

These are some of the known issues and their workarounds for connecting departmental and personal Internet of Things (IoT) devices for University of Minnesota IoT Wi-Fi service.

Wireless Printers

Poor service for everyone in the area of the printer.

Wireless printers broadcast a signal that conflicts with University of Minnesota networks. Instead, please connect to printers using a USB cable.

Apple TV

Attempt the connection with UofM-IoT following the instructions in the [Register a Personal Device for the Internet of Things \(IoT\) Wi-Fi Service](#) Self-Help guide. In case that does not work, you can attempt to connect using our enterprise eduroam connection by using [Apple Configurator](#) (link is an archived Apple article).

Apple Configurator can set up a profile to add to the Apple TV that will connect to our enterprise connection. Some support may be offered from **appletv@umn.edu** and user discussions are taking place on **appletv-users@umn.edu**.

For University Departments hoping to use an Apple TV in a meeting or conference room, send a message to **appletv-users@lists.umn.edu** for assistance.

Chapter 3. Convert a Legacy Device

The Internet of Things (IoT) option for departmental and personal devices is the Encrypted Service. This service enables enhanced security for your devices. It also allows devices to connect that require a password (PSK) to attach to the network.

- **Note for IoT Admins of departmental IoT devices:** Devices without a pre-shared key or PSK need to be updated to the new encrypted service following this article's directions.

Converting Your IoT Device from Legacy Unencrypted Service to Encrypted Service

The legacy IoT service has been deprecated and will be retired soon. Any new devices must be registered for the new encrypted IT service. If your device is connected using the Legacy Unencrypted Service you can follow these steps to convert to the new Encrypted Service.

1. If you are off-campus, [connect to UMN VPN](#).
2. Go to [ClearPass Guest Device Manager](#) and select **Manage Devices**.
3. In the Manage Devices page, highlight the MAC address you want to update and select **Edit**.
4. An Edit form opens. In the **Wi-Fi Password** section, check the **Use a unique Wi-Fi password for this device** box.
5. Select the **Update Device** button.
6. Your new password will be generated and displayed in the **Current Password** section.
 - **Note:** If you bulk registered multiple devices as a departmental IoT Admin, select **Manage Devices** to see the newly created passwords. Use the password corresponding to an individual device to connect to UofM-IoT. If you want to set the same password for a group of devices, refer to [Setting the Same Password for a Group of IoT Devices](#).
7. You have completed the process. You can now use this new password to connect your IoT device to the UofM-IoT Wi-Fi network.
